In the viflow report "Process description" no symbols are displayed during printing (KB10351)

Sebastian Eich - 2021-06-16 - in viflow Reports

If you try to print the "Description" process report, the symbols from the input / output overview are no longer displayed in some cases.

You can still see the symbols in the report, but not in the print preview or directly on the printed page.

The printed report should also look like this:

<i>Input / Output</i>	<i>Process</i>
	1 Check production list
▷▷ Customer appointment	Process Type Activity
2 ◀	
	2 Place production order
1 ▶	Process Type Activity
3 ◀	Assigned Information Operating facilities information (Miscellaneous) Parts list (Miscellaneous) Storage withdrawal slip (Miscellaneous) Working plan (Miscellaneous)
	Participants Process planning (contributes) SAP (System (IT)) IT (contributes)

The symbols in the report marked in red are no longer displayed in the printout.

Solution:

The disappeared symbols are background graphics that are disabled by default in most browsers.

In order to display these in the printout again, the "Print background graphics" option must be activated in the print settings of the used browser.

Restriction in the Edge browser:

This browser does not offer the possibility to print background graphics. In this case you have to switch to another browser.
